Thomas Kolodziejczak
FRONT-END WEB DEVELOPER

💻 thomas-ko.github.io/portfolio/   ✉ tomkolodzi@gmail.com

I'm a self-taught web developer whose main focus is on front-end development, but I do have some experience with back-end technologies in the MEAN stack. I'm highly motivated and a very good self learner. I like figuring out how things work and then applying those skills on new challenges and projects. I'm currently teaching myself PHP and WordPress. Check out my portfolio at thomas-ko.github.io/portfolio/ .

Skills

HTML5   CSS3   Javascript   jQuery   Responsive Design   Bootstrap   AJAX / APIs

Experience with:

Model-View-Controller (MVC)   Node.js   Express.js   MongoDB

FEATURED PERSONAL PROJECTS

These are just some of the personal projects I've been working on. To see the live versions and code of these and other projects, visit my portfolio at thomas-ko.github.io/portfolio/ .

Simon Game
-Javascript -jQuery -MVC -HTML5 -CSS3 -Vector Graphics
This game is a clone of the memory game Simon. It's the user's job to copy the color sequence of the computer. If strict mode is on, getting the sequence wrong results in starting over.

Breakfast Rate
-Node -Mongo -Express -Restful Routing -Forms -jQuery -User Registration -HTML5 -CSS3 -Bootstrap -Responsive
This app that let's registered and logged-in users view, share, and comment on their favorite breakfast recipes. This was my first big project focusing on back-end development.

Twitch Streamer
-AJAX / APIs -Javascript -jQuery -MVC -HTML5 -CSS3 -Responsive Layout -Bootstrap
Using the Twitch API, this app shows the user a bunch of twitch channels and tells whether they are online or offline. The user can sort what is shown by clicking on the appropriate tab.

Weather App
-AJAX / APIs -Javascript -jQuery -MVC -HTML5 -CSS3 -Responsive Layout -Bootstrap -Vector Graphics
This app shows the user's current weather by retrieving weather information from the Weather Underground API. Addtionally, the user can search the weather by inputting a zip code.

EDUCATION

These are just two of the more significant/recent online courses I've taken. I've also done many courses and projects from udacity, codecacademy, khanacademy.
